PANTHER SPIRIT REMAINS STRONG AS UNI RESPONDS TO PANDEMIC
The University of Northern Iowa takes investments and in return, provides valuable services to our students, state and the nation. Take a look at our impact over the past year.

**UNI ignites the the Iowa economy and helps provide a skilled workforce:**
- **82%** of undergrads from Iowa stay in Iowa
- More than 90 percent of UNI undergraduates from Iowa
  - from all 99 counties in Iowa
- **40%** of undergrads from outside of Iowa stay in Iowa
- **70%** of UNI undergrad degrees awarded in in-demand jobs

**UNI creates an accessible, engaged education for their students:**
- **95%** UNI graduates with bachelor’s degrees are employed or pursuing advanced study within 6 months of graduation
- New teachers graduate from the university every year
- **450+** new teachers graduate from the University every year

**More than 92 percent of UNI students receive financial aid:**
- loans
- grants
- scholarships
- workstudy

**UNI serves the state and the nation in business development and sustainability:**
- Business and Community Services leverages every $1 invested by the state with $5 in private grants, fees or federal funding
- Starboard Training has saved military bases and depots $500,000 per year in painting and coating costs
- Distributed 1,300 acres of native seed for 39 country roadsides as part of the Tallgrass Prairie Center’s roadside vegetation project
- Green Iowa celebrated its 10th anniversary and has impacted the state by increasing energy efficiency by 566,000 hours through 500 members with nearly a $14 million impact
- Business and Community Services provided assistance to nearly 3,370 unique business, community and local government clients in all 99 counties reaching more than 351,000 Iowans.

**Hosted Green Iowa AmeriCorps sites**
- weatherized 600 homes
- conducted 500 educational programs
- 8,000 people in attendance

**UNI is $5,000 below the national average on student debt**
- UNI graduates have the lowest indebtedness of any four-year public institution in Iowa
- UNI is nine percentage points above the average four-year graduation rate of institutions with a similar student profile
- UNI students earn a grade point average of 3.10

**More than 90 percent of UNI undergraduates to earn a four-year degree**
- UNI creates a pathway for community college students
- UNI is $5,000 below the national average on student debt
Dear alumni and friends of the university,

We hope this magazine finds you and your family doing well and you are navigating the new normal of our lives. You might have noticed your magazine arrived a bit later than last year. As you can imagine, our spring on campus was different in so many unprecedented ways requiring additional time to cover developing stories. Similar to universities and colleges around the world, we’ve been able to adapt and transition our methods and practices to fulfill the needs of our students in a very short time. We have included a great article describing some of UNI’s responses to the crisis that is COVID-19. Even apart, socially distanced, we are together.

This issue is rooted in experience. Our most recent graduates will tell about the first-ever virtual graduation at UNI. We each possess a different definition of UNI. I think that is what makes this issue so fascinating: contemplating each of our unique experiences while also acknowledging what universally comprises UNI.

It’s you — our phenomenal alumni and friends. You take what you learned here and put it to good work, making the world a better place and coming together in a time of crisis to support our students and communities. Each of us and the university are continually evolving and working to do and be better. I felt compelled to share a couple of stories in this issue that discuss the reality of addressing institutional gaps in supporting all of our students. While UNI is working to create a campus culture of both acceptance and inclusion of all students, part of that work is recognizing the great disparities that exist among them. It is not simple, but it is critical for all of us to reflect upon our own decisions and the systems that surround us to identify and rectify our unconscious biases.

I can tell you that UNI is dedicated to creating a campus culture that is welcoming, supportive and celebratory of all our differences. Our campus is committed to nurturing an environment of open and honest dialogue and critical conversations that will continue to shape future decisions and programming to ensure our university is exceeding expectations for all who step on campus. We are working to make certain that all of our alumni have college memories that are positive and inspiring.

Loyally,

Leslie Prideaux
Assistant Vice President, Alumni Relations
President, University of Northern Iowa Alumni Association

We are proud to call home. We are an inclusive community we are all proud to call home.
It's not yet over, but 2020 has already been a year unlike any other at the University of Northern Iowa. As COVID-19, the disease caused by a novel coronavirus, spread globally, it brought unprecedented changes to the lives of students, faculty and staff. To protect public health, classes were held remotely, sporting events and conferences were canceled and commencement was held online. But through it all, UNI's sense of community stayed strong. Panthers used 3D printers on campus to make face shields desperately needed by healthcare workers. Departments donated their stockpiles of personal protective equipment. UNI distributed millions in federal aid to the students with the most need. And generous donors — some of them recent graduates — gave over $50,000 in a matter of days to create a new scholarship to support students financially hurt by the pandemic.

Immediate response

The university already had a framework in place for an infectious disease outbreak thanks to emergency planning that had been done years ago. University officials moved quickly to mitigate dangers and keep everyone safe, forming a COVID-19 task force that worked closely with public health officials and others at the local, state and national levels to prepare while ensuring the health and safety of all.

“No one can predict exactly what will happen,” said Joseph Rayzor, UNI's risk management director who oversaw the university’s COVID-19 task force early in the response, “but by being prepared and communicating frequently with the campus, we can do so much to keep our community safe.”

As it became clear it was necessary to limit contact between individuals to slow the spread of disease, UNI did its part, moving to a completely online format for classes on March 23. Within a week, employees were encouraged to work remotely if able.

“The health and well-being of our students, faculty and staff remains a paramount priority, and we are taking reasonable precautions to protect campus at this time,” UNI President Mark Nook said at the time.

To help keep Panthers informed about what was happening, the university launched the website prevent.uni.edu to provide one location for all information related to UNI's response to the pandemic.

Adjusting to life online

Moving classes online wasn't easy, but across the university, individuals and departments moved quickly to help ensure the university’s mission to educate students continued.

Some classes were obviously easier to transition to online learning than others, but faculty persisted and figured out ways. Amanda McCandless, an associate professor in the School of Music, spent hours each week teaching clarinet lessons via Zoom and also had students record videos of themselves performing.

“I’ve been trucking ahead,” said James Mons, a freshman music major. “I miss my UNI family a lot, and I'm eager for all this to pass, but we push on despite these circumstances.”

Julianne Gassman, '92, '96, an associate professor in the department of health, recreation and community services who has previously taught online, pointed out the benefits of becoming a more well-rounded educator.
“If there is a little silver lining in this, it’s that we will become more creative. We are becoming better problem solvers, we are thinking more critically about the future, and somewhere those skills will be put to great use,” Gassman said.

Services such as counseling, mentoring and homework help moved online, as well, to ensure students would still have these services regardless of where they were. The Center for Multicultural Education as well as Gender and Sexuality Services launched virtual communities to allow the students served by these offices to stay in communication and access programming.

UNI’s IT Department was one of the areas significantly affected by the move, and they met the challenge. Moving nearly everything online meant a significant increase in the demand for many of the services the department provides as well as changes in how some of their work is done.

“‘It was an intense week,’” said Nate Klosterman, director of network and infrastructure services. “Everybody was concentrating on how we can get people in remotely. It was fast and furious for a while.”

Also with the change came increases in help desk requests, use of Zoom for classes and meetings, tutorial needs for faculty to learn unfamiliar resources and so much more. But the hard work and dedication of these professionals made the transition much easier.

The increased reliance on technology was not the only issue facing Panthers. Closing campus meant many students faced financial challenges, both from unexpected expenses as well as reduced income. Once again, the UNI community worked to find solutions. The UNI Foundation participated in the Giving Tuesday Now movement on May 5 to raise funds for the #UNItogether Scholarship Fund to help students who have experienced financial hardships as a result of COVID-19. The campaign exceeded its goal, raising just over $50,000.

“We wanted to do all we could to assist students who have been financially impacted by the coronavirus pandemic,” said Sarah Parsons, ’05, UNI’s director of advancement communications. “We were so thankful the Panther family stepped up for our students.”

UNI gives back to the community

While the response to help the UNI community was tremendous, the UNI community’s response to help others was just as strong. Students, faculty and staff from throughout the university found ways to contribute.

When it became clear that healthcare workers did not have access to the protective gear they needed to treat patients and stay safe, UNI’s Additive Manufacturing Center utilized their 3D printers to manufacture plastic face shields.

“It’s something really special,” Jerry Thiel, ’93, director of the AMC, said at the time. “There’s been an outpouring at the university — everyone is chipping in. We’re hearing from everyone ‘we want to be involved, we want to help.’”

They were not the only ones to help. Personnel from the chemistry, biology and physics departments on campus collected and donated about 500 pieces of spare personal protective equipment such as goggles, face shields, lab coats and exam gloves. The UNI Bookstore sold its entire stock of protective goggles at cost to local healthcare providers, adding about 5,000 items to their supply.

“We were just completely ecstatic to receive it,” said Anesa Kajtazovic, ’07, a development director at UnityPoint Health’s Allen Hospital. “UNI has been so generous to our hospital and just been an extra helping hand to make sure we’re ready.”

Many at UNI also pitched in to make reusable fabric masks. Students and faculty from Theatre UNI worked in shifts to maintain the dedication of these professionals made the transition much easier.

UNI has been so generous to our hospital and just been an extra helping hand to make sure we’re ready.”

- ANESA KAJTAZOVIC, ’07, DEVELOPMENT DIRECTOR AT UNITYPOINT HEALTH’S ALLEN HOSPITAL
social distancing while they produced masks from fabric left over from theatre productions. Those masks were donated to Western Home Communities, a retirement and assisted living community in the Cedar Valley, to be used by medical workers and visitors.

“All theatre majors are required to take stagecraft class, and they learn to sew as part of it,” said theatre department associate professor Amy RohrBerg. “We have a whole slew of machines and fabric and supplies to make garments for the shows. We have them sitting there waiting. We have a pattern, a place to send them and students willing to work.”

Others pitched in on their own. Chris Schrage, ’96, ’97, a business marketing instructor, made masks for a couple of former students who required them for work as well as a clinic in Clarksville and area emergency responders.

“I’ve been blessed with the talent to sew and … I’m just gonna’ do what I can to help the cause and take care of other people,” said Schrage.

Aleah Vaske, a student double majoring in management and marketing, utilized the skills she had learned from her roommate, a textiles and apparel major, to sew masks for her local hospital in Manchester.

“I really appreciate the nurses and doctors still going to work — they’re putting themselves on the front lines,” said Vaske. “They’re always thinking about other people. This is the best thing I can do at this difficult time.”

Events in a virtual world

Spring semester at UNI usually brings a variety of events that students spend months, even years, preparing for. But with social distancing came the cancellation of all large gatherings. UNI’s faculty, staff and students found ways to work through the challenges.

Quite possibly one of the largest challenges was how to recognize the UNI students who were set to graduate in the spring semester. How does a university have a commencement ceremony for thousands of people who are spread all over the world? Virtually, of course.

Officials worked for several weeks, looking into options and talking with other institutions to share ideas. The result was a website that includes slides of student photos and comments along with their academic achievements. President Nook, Provost Jim Wohlpart and others recorded video messages also included on the site.

“Commencement is our most cherished ceremony because it is about celebrating you, our students,” Nook said. “We know the loss you feel in not being able to be on campus and celebrate this time.”

Wohlpart had similar sentiments.

“As the world adjusts to the sweeping changes of the first few months of 2020, officials have started looking ahead. UNI has established a steering committee to start planning for the return to campus, looking at a variety of scenarios that would allow students, faculty and staff to safely resume classes in the fall.

University officials also recognize that while plans are in place for in-person classes and activities this fall, there may be some students who have difficulty starting face-to-face classes due to extenuating circumstances. These students will have the option to begin their UNI experience from home through specially designed online classes with embedded academic support and social engagement, and then transition to campus as soon as they’re ready.”
As higher education becomes more diverse, UNI works toward a culture of belonging. One family’s UNI connection marks the progress as well as the work left to be done.
Growing up as an African-American in Marshalltown in the 1940’s, Roger Maxwell ’54, age 88, experienced segregation as a fact of life. As a child, he was prohibited from swimming in the public pool. His family’s home became the de facto place to stay for black people coming through town as many were repeatedly refused lodging. It seemed everywhere Maxwell looked, people like him were denied opportunities.

But at the University of Northern Iowa, then the Iowa State Teachers College, he found a lifeline, earning a degree in music education, making friends across lines of class and race and dazzling his fellow students with his musical virtuosity. It wasn’t easy, but Maxwell went on to become Iowa’s first black high school band director, making an impact on countless lives along the way.

“Everything emanated” from UNI. If not for his degree, Maxwell may have ended up like his parents: working hard, but always struggling to make ends meet. Maxwell described times when his family, living close by to the railroad, would gather coal in burlap bags to heat the house. “UNI saved me,” he said.

But the University of Northern Iowa was like you as less-than,” Greene said. “You have to try really hard to prove yourself.”

Greene says she makes efforts to affect change in small ways. That includes anything from speaking up in class to making prospective students feel welcome in her role leading campus tours.

“In that sense I do make sure I’m trying to do [my family] proud,” Greene said.

Together, Greene and Maxwell’s experiences tell a generational story about progress — and in some cases the lack of it — at a time when campuses and institutions at all levels of society were coming to grips with a younger generation that is eager for change.

The vision leaders have for campus is that all students, when asked “What does UNI mean to you?” have the same answer, “home.” Leaders have instituted new initiatives to improve the campus climate in order to make this vision a reality.

“It’s hard being black here,” Greene admits. “But I love my education from UNI.”

Greene recently became student body vice president and has made diversity and inclusion a top priority. Greene said she wants others to understand that while racism isn’t always overt, the small indignities add up.

“You always feel like people view you as less-than,” Greene said. “You have to try really hard to prove yourself.”

Greene says she makes efforts to affect change in small ways. That includes anything from speaking up in class to making prospective students feel welcome in her role leading campus tours.

“In that sense I do make sure I’m trying to do [my family] proud,” Greene said.

“I understood it was a joke. I was a mature kid — but it persisted when the boys would come up like, ‘You’re Chocolatina! You’re darker,’” Greene said. “So that was the first time it became apparent for me.”

“Even in high school, we had to assume,” Greene said. “And I have the most generic spelling of Rachel, it’s the one in the Bible … I was like, ‘Really?’”

Greene says, like other people of color she shoulders the burden of routine encounters with “microaggressions,” or “everyday” verbal or behavioral indignities. These can be explicit — she gets frequent comments and questions about her hair, a common microaggression against black women — but also more subtle. Greene said she feels implicit and constant pressure to bust racial stereotypes and to “prove” herself in the eyes of others.

“For Rachel Greene, a West Des Moines native, growing up in a predominantly white K-12 education system at times meant being made to feel like you don’t belong. She first became aware of her skin color within the confines of a classroom.

She recalled her first grade class was reading a book entitled “Chocolatina,” which told the story of a young girl who ate so much chocolate that she became chocolate herself. The white teacher handed out chocolates to the class to see who would “become Chocolatina.”

“That was the first time it became apparent for me.”

“Every single day, I wake up, put on my body armor and figure out which version of Rachel I have to be in every single different situation I’m in,” Greene said. “Because if I’m 100 percent Rachel, then I won’t get anywhere to where I want to be in achieving my goals. I have to figure out each narrative I have to shape so that I appeal to other people.”

— RACHEL GREENE

"I have to figure out each narrative I have to shape so that I appeal to other people."

Across the country, college campuses are becoming more racially diverse than ever before. Students of color made up 45 percent of the nation’s total undergraduate student population in 2016, according to a recent American Council on Education report.

Iowa’s population is less diverse but is undergoing a dramatic shift. Just 5 percent of Iowa high school graduates were minorities in 1998 but that number had tripled by 2018 and is expected to stand at 22 percent by 2030. UNI’s minority student population has followed a similar curve, growing over the past decade, minus a slight dip in the last year, and now stands at approximately 10 percent of total enrollment.

UNI leaders are working to stay ahead of the demographic curve, focusing on ways to reach students who are traditionally underrepresented in higher education. That institutional priority is rippling across campus, sparking new and renewed conversation on diversity, inclusion and equity.

Last October, President Mark Nook announced the formation of the President’s Diversity, Inclusion, and Equity Advisory Committee to create an action plan, which will “provide a clear set of priorities to create the needed systemic change to our culture.”

“Work on diversity, inclusion and equity is difficult, but it is essential to building a campus community that is welcoming and supportive of all our students and employees,” Nook said. “Together we will build a university that better serves all students.”

Part of the change happens from within by elevating talented people from all backgrounds into leadership positions, part of ongoing efforts to make campus more inclusive.

Gwenne Berry, UNI’s chief diversity officer has been at UNI for over 25 years, serving as the university’s first chief diversity officer since 2016. She says a more diverse campus community will pay dividends for student success, retention and the overall campus climate. But it’s about more than numbers — it starts with belonging.

“Diversity is when you get asked to the dance, ‘inclusion’ is when somebody at the dance asks you to come out on the floor,” said Berry. “That’s what I want UNI to be. I want people to come here and see themselves, and say, ‘Yep, there’s a place for me there.’”

Berry said the same goes for students from other traditionally underrepresented backgrounds: women, LGBT students, veterans and students with disabilities. She approaches diversity and inclusion as education and as a conversation.

Robert Smith has been a part of that conversation for more than 30 years at the UNI Center for Urban Education (UNI-CUE), an educational opportunity program serving low-income and first-generation students in Waterloo.

Smith, who is executive director at UNI-CUE, has seen the ebb and flow, campus uniting around diversity and inclusion for a spell and then in other years the cause losing momentum. But with forecasted changes in the demographic makeup of the state and the country, he sees the next few years as a defining moment for the university.

“Diversity and inclusion is not easy,” Smith said. “It’s not something you put on paper. It’s going to take some uncomfortableness for people to get there. Until we have real conversations, and be pro-active — not reactive — it’s going to be a challenge.”

“I think we can get there. I’m an optimistic person,” he continued. “History will tell us whether we move in the right direction.”
We all need to support each other. I don’t care who it is. [We need] to reach out and help each other.”

- ROGER MAXWELL

“Roger Maxwell, School of Music Alumnus (’54), 1st Jazz Band 1951 ISTC (UNI), Music Educator.”

So reads the inscription below a picture of Maxwell that hangs in Russell Hall. The life that led to that honor was one of both trials and triumph.

Maxwell remembers being one of a handful of black students on UNI’s campus, then the Iowa State Teachers College (ISTC), when he and several others founded the UNI Jazz Program in 1951. Those memories remain close to his heart decades later.

“Like the very first concert in February of 1951, which drew an unexpected response. Maxwell said that night some 200 chairs were initially being set up in the Commons as the band warmed up and took the stage with the curtain drawn.

“Open the curtain — there had to be 1000 students!” Maxwell recalled. “That floor was full, 200 chairs. People sitting in the aisles all the way around. Standing there. There were three balconies. ... All full.”

Subsequent performances had to be moved to the ISTC auditorium in what is now Lang Hall. The band’s third performance, a few months later, attracted a capacity crowd of 1,500.

Yet, being the only black member of the group meant Maxwell would occasionally experience it all from the outside. He told of one night after a packed concert when the group decided to go out on the town to celebrate.

Knowing he would likely be denied service, Maxwell drove separately from the group over to the club in Waterloo.

“I knew that I was not going to be invited, you know. Not permitted to join the group,” Maxwell said. “So I came in and went down to the restroom to let everything settle down. Everybody was in the back room — you could hear their laughter and everything. Just joyous, you know. So I came up, and I went over to check my coat. And they said, ‘We do not allow — we do not serve Negroes.’"

Maxwell proceeded to collect his things and passed by the rest of the group on the way out. They questioned why he was leaving — Maxwell said he’d see them back on campus.

“What do you mean ‘see us back on campus?’ Sit down on over here!” they replied.

Maxwell explained the situation. The group went back and forth — ‘Get outta here! What are you talkin’ about?’ Maxwell replied definitively. ‘They do not serve negroes. I’ll see you back on campus,’ and left.

“I understand later,” Maxwell recalled. “Later on, everybody stood up — went and got their coats. The manager said, ‘But you’ve put your orders in! Your orders are in.’ And somebody [in the group] spoke up and said, ‘If you can’t serve our friend, you will not serve us.’ And they all walked out.”

Telling the story made Maxwell emotional decades later.

“I could depend on those folks,” he said.

Sixty-five years after that first jazz concert, Maxwell’s name was added to the Hall of Fame wall in Russell Hall.

“You know, it’s — realizing how much UNI has meant to me,” Maxwell said. “And for my colleagues there to select me for this honor, it’s still within my system [the] joy and appreciation.”
ONE SEASON. ONE DREAM. FOUR WORLD RECORDS.

It was a record-breaking outdoor track season in the discus for University of Northern Iowa junior Jessica Heims.

In fact, the season was steeped in such dominance that by the end of it, the only discus world records she was breaking were her own.

But before going further, it’s important to go back and consider two key moments of Heims’ past.

The first is her birth. While Heims was in the womb, strands of the amniotic sac ensnared the right side of her body, restricting the growth of her right leg. It’s a rare condition known as amniotic banding. At birth, the leg was severely underdeveloped. It was missing bones, and it hampered Heims’ mobility. After a year of failed treatments, her parents made the difficult decision to amputate her leg at the midcalf.
The decision meant Heims could start using prosthetics, which gave her newfound freedom of movement and allowed her to discover her passion for track and field.

“It was honestly the best thing my parents could have done for me,” Heims said.

The next moment occurred in 2016, when, through passion and perseverance, Heims reached the highest of athletics stages — the Paralympic Games in Rio de Janeiro.

There, she set a personal best in the discus, throwing it 25.98 meters, besting her previous best by two meters. The throw was good enough to advance to the finals, where she placed eighth overall. It both fulfilled a dream and planted a desire for more.

“I got a taste of the big stage in Rio, and it drove my hunger for improvement and allowed me to set bigger and scarier goals for myself,” said Heims.

In 2018-19, Heims missed UNI’s indoor track season due to surgery. But when the outdoor season opened, she wasted no time demonstrating she had reached the next level.

It started at UNI’s season opener at the Iowa Musco Open, where she threw a discus traveling 34.4 meters, a world record.

In June, Heims traveled to Italy to compete in the Para Athletics Grand Prix, where she captured three gold medals and hurled a discus traveling 34.2 meters. Another world record.

And she wasn’t done. In August, she competed in the 2019 Parapan American Games in Peru, where she rocketed a discus traveling 34.4 meters. Yet another world record and a throw that beat the field by over 4.5 meters.

Then, a throw she made earlier in the year was made official, and that set another world record. This one happened at the Wisconsin Twilight meet in the spring, where she catapulted a discus traveling 35.5 meters.

So, for those keeping track, that’s four world records set in one year and a 10 meter improvement from her 2016 Paralympic heave.

It was an improvement Heims credited to a change in mindset.

“I always wanted to be able to reach this point, but I honestly wasn’t sure how or when it would reach this point, but I honestly wasn’t sure how or when it would be able to be a possibility,” Heims said. “For a long time, it seemed out of reach, but once I fully trusted my coaches and accepted that my identity wasn’t based on my athletic performance, I was able to focus and improve.”

These improvements were the culmination of a journey with the discus that started when Heims was around 11 years old. When she threw the discus for the first time at a youth track meet. Not long after, her father found a discus in a ditch and let her take it home to practice. The rest is history.

“At first I liked it because it was such a stark contrast to running, and it was the only throwing event that a little girl with stick-thin arms could do,” Heims said. “As I got older, I started to love it more for the complexity of the technique.

“I got a taste of the big stage in Rio, and it drove my hunger for improvement and allowed me to set bigger and scarier goals for myself,” said Heims.

In 2018-19, Heims missed UNI’s indoor track season due to surgery. But when the outdoor season opened, she wasted no time demonstrating she had reached the next level.

It started at UNI’s season opener at the Iowa Musco Open, where she threw a discus traveling 34.4 meters, a world record.

Then, a throw she made earlier in the year was made official, and that set another world record. This one happened at the Wisconsin Twilight meet in the spring, where she catapulted a discus traveling 35.5 meters.

So, for those keeping track, that’s four world records set in one year and a 10 meter improvement from her 2016 Paralympic heave.

It was an improvement Heims credited to a change in mindset.

“I always wanted to be able to reach this point, but I honestly wasn’t sure how or when it would be able to be a possibility,” Heims said. “For a long time, it seemed out of reach, but once I fully trusted my coaches and accepted that my identity wasn’t based on my athletic performance, I was able to focus and improve.”

These improvements were the culmination of a journey with the discus that started when Heims was around 11 years old. When she threw the discus for the first time at a youth track meet. Not long after, her father found a discus in a ditch and let her take it home to practice. The rest is history.

“At first I liked it because it was such a stark contrast to running, and it was the only throwing event that a little girl with stick-thin arms could do,” Heims said. “As I got older, I started to love it more for the complexity of the technique.

“I always wanted to be able to reach this point, but I honestly wasn’t sure how or when it would be able to be a possibility.”

“JESSICA HEIMS

You can never be perfect at it, and there is always something to improve on.”

And while some may think throwing a discus is about the arms, Heims said most of the power comes from the legs, which can make the motion challenging for her with a prosthetic.

“The greatest difficulty I find with throwing discus is the fact that I don’t have a lot of the feeling or mobility in my leg that is often necessary for the spin,” Heims said. “Being unable to feel what my leg is doing or where it is landing poses a challenge in learning and executing parts of the throw. I also have a limited range of motion, so I have difficulty keeping my knee in a bent position or keeping weight and pressure on it while spinning.”

These challenges mean that Heims has to take shorter practice reps than her teammates, as her leg can’t handle the constant pressure and spinning.

But that hasn’t stopped her. With a record-breaking summer behind her, Heims is looking ahead to the Para Athletics World Championship in Dubai and the Paralympic Games in Tokyo, both held in 2021.

Until then, Heims has enjoyed returning to the familiar surroundings of the UNI campus to continue her pursuit of a biology degree.

“It’s nice to have that to bring myself down to earth,” Heims said. “It’s nice to take a breath and be a normal student and do normal stuff.”
On a crisp October day at the center of campus, an outdoor concert is afoot — but you might not realize it.

A chorus of bells peals through the usual hustle and bustle of midday foot traffic. It is pleasant, dynamic music: the melodies sometimes delicate and twinkling, at other times featuring a low gonging that reverberates at great length.
Technically the audience for this concert stretches for upwards of a half-mile — the outer reaches of the bells’ sustain by some estimates — but in truth a select few are intent on listening. Today, a dozen or so UNI alumni and local community members huddle together on benches surrounding the base of the Campanile.

They’ve come to hear Karel Keldermans play the bells.

“I’m kind of a Karel groupie,” says Mark Welty, ’71, with a smile, not pulling his gaze from the top of the tower. “I haven’t hardly missed a concert of his at UNI.”

Keldermans is one of North America’s preeminent performers on an instrument called the carillon (keh-ruh-laan), an assembly of large bells played using a keyboard. Today, he treats the campus to a special hour-long program on UNI’s carillon, one of 50-plus concerts he’ll give this year as his performances take him across the globe. Keldermans has delivered two seasonal concerts at UNI annually since the early 2000s.

While it might sometimes be taken for granted, the origin and significance of the UNI Campanile is actually quite unique according to Keldermans, who holds a master’s degree in campanology. In Keldermans’ experience, many campaniles are a product of a single donor’s vision or a select few contributing funds. But UNI’s was a multi-generational group effort, borne from a congress of imagination, reverence and sheer Midwest grit.

And the Campanile still holds a special place in the hearts and minds of alumni.

“There are people all over who went to UNI and who have an affinity for this,” Keldermans said. “That’s unique. That usually doesn’t happen.”

- KAREL KELDERMANS

There are more than 180 carillons in North America and 450 elsewhere in the world. The Guild of Carillonneurs in North America define a carillon as “a musical instrument composed of at least 23 carillon bells — it is played from a keyboard that allows expression through variation of touch.” UNI’s is played manually using a keyboard comprising a series of pedals and paddle-like keys. The keys are connected to a series of “clappers,” which strike each bell to produce musical notes. The only automation is the chime of the clock every hour on the hour.

**WHAT IS A CARRILLON?**

There are more than 180 carillons in North America and 450 elsewhere in the world. The Guild of Carillonneurs in North America define a carillon as “a musical instrument composed of at least 23 carillon bells — it is played from a keyboard that allows expression through variation of touch.”

**QUICK FACTS**

• The UNI carillon is one of three in Iowa
• Our carillon contains 47 bells
• The largest bell weighs 2.5 tons
1914
The Iowa State Teachers College Alumni Association announces plans to erect a “suitable memorial on behalf of the faculty, graduates, students and friends of the institution,” in the form of a campanile.

1924
Committee formed for “A Campanile for ISTC in 1926” in honor of the college’s 50th anniversary.

September 19, 1926
Construction of Campanile is completed with a 15-bell chime housed in the belfry. A total of 12,500 people attended the dedication services, according to the student newspaper.

Spring 1924
Present location of the Campanile selected and a groundbreaking is held.

1924
Professor Myron Russell, head of the music department, calls for adding 32 bells to upgrade the chime to a full-fledged carillon with greater musical capabilities.

1965
A major renovation of the Campanile is completed, the last significant capital improvements to the structure.

1968
Carillon project completed as the State College of Iowa changes its name to the University of Northern Iowa. 35 bells are purchased, replacing 3 existing bells, taking the total to 47. The new bells were cast in the Netherlands. More than 5,000 people contributed to the project.

1919
Campanile project reimagined as a World War I memorial. The location was planned to be near College Street, between the President’s House and the College Hospital (now known as the Honors Cottage).

1919
Campanile project continued, now with 15 bells. The Campanile is dedicated with 12,500 people in attendance.

1965
Modern Campanile is born.

1968
Spring 1968
The Iowa State Teachers College Alumni Association announces plans to erect a “suitable memorial on behalf of the faculty, graduates, students and friends of the institution,” in the form of a campanile.

Andrew, who now works at UNI, says he and Amy make it a point to continue their tradition of an evening walk through campus — joined now by their children, Zoey and Quentin.

“We knew that we were going to be a UNI couple for life and keep coming back here,” Andrew says.

“We love this place. And having the Campanile as a marker to keep coming back to and having that memory is very special.”

Delving deeper into the storied history of the Campanile, it becomes clear that its significance stretches far beyond any one tradition. Students in recent years have gathered there to observe everything from political protests to vigils for friends and fellow Panthers whom they have lost. When the Twin Towers fell on 9/11, students flocked to the Campanile in mourning. It has served as a regular setting for marriage proposals, graduation portraits and countless campus events.

And there is plenty of quirky Campanile history to be found in the university archives.

Technically, the Campanile once ran for student body president. The 1975 student body presidential election took a satirical turn with “Campy” entering the race atop the “Tower of Power Party” ticket. Student Jack Fleming, ’76, was the self-appointed spokesperson who launched both the party and the candidacy.

As Andrew describes it, he knew shortly after meeting Amy (while study buddies in a humanities class) that he would ask her to marry him. When that day arrived, he was a “nervous wreck” — at one point, he actually dropped the ring on the ground in front of Amy. Luckily, she didn’t notice.

Andrew had planned to pop the question on the couple’s routine walk through campus. Despite the initial hiccups, the rest went according to plan. As the two strode past the Campanile, Andrew turned to Amy.

“I got down on one knee — we were at the northwest corner of the Campanile — and I asked her. She said, ‘Of course I’ll marry you.’”

Student Jack Fleming, ’76, was the self-appointed spokesperson who launched both the party and the candidacy.

For many alumni, the Campanile evokes a singular event: Campaniling. It’s the annual tradition the Friday night of Homecoming week when students gather at the Campanile to kiss their significant other — maybe even a stranger — at the stroke of midnight.

Andrew Morse, ’05, says the Campanile can be seen as the intersection of tradition and romance. He and his wife, Amy, ’09, both UNI graduates, have a love connection involving the Campanile that continues to this day:

And there is plenty of quirky Campanile history to be found in the university archives.

Technically, the Campanile once ran for student body president. The 1975 student body presidential election took a satirical turn with “Campy” entering the race atop the “Tower of Power Party” ticket. Student Jack Fleming, ’76, was the self-appointed spokesperson who launched both the party and the candidacy.
The consensus (sic) of opinion has it that the sifter decided [his] brown woolen suit, Woolworth underwear, and Kresge socks were not equal to the weather changes" a College Eye article noted several days later. That student was neither the first nor the last to get cold feet about scaling the Campanile’s 84 stairs. Over the years, the narrow climb has proved a reliable test of one’s acrophobia.

Another through-line in the history of the Campanile is the music of the carillon. Bob Byrnes, long-time university carillonneur and faculty member, is perhaps the individual most closely associated with the Campanile. Byrnes began his tenure in 1972 and continued in that post until his death in 2004. At one point, he was playing three times each weekday and throughout the weekend as well.

Byrnes graduated from UNI in 1971. He would go on to earn a master’s degree in music from UNI, presenting his thesis on the instrument in 1977 — likely the first and only time that was done in the history of UNI.

Byrnes was full of stories of his time atop the Campanile, according to university archives. In one instance, a brave German shepherd climbed the Campanile stairs accompanied by a young child who had ventured through an open door. Byrnes ended up carrying the stubborn animal back down the stairs himself.

In May of 2004 the bells fell silent following Byrnes’ death. Keldermanns played a concert that fall in honor of his friend.

While Fleming insisted the campaign was not a joke, a number of the party planks suggested otherwise. One called for renaming the new UNI Dome to the Richard M. Nixon Coliseum, just a few months after the president resigned due to the Watergate scandal. A subsequent letter in the student newspaper denounced the candidate, attesting that the party’s platform “has neither chime nor reason.”

In another failed campaign, a student by the name of D. Wane Collins, ’31, announced a 10-day sit-in atop the Campanile slated to begin August 22, 1930. Undertaken as part of a bet, the feat would have won him $25, equivalent to $375 today.

The tradition of the university carillonneur goes back to the first “chimemaster,” who instructed students on the original 15-bell instrument (formally known as a “chime”) in the 20’s and 30’s. Byrnes was the last to hold the position, officially a member of the faculty, and upon his death students playing the carillon became a rarer occurrence.

That is, until a group of music students resurrected the tradition, forming the UNI Guild of Carillonneurs in 2015. Tommy Truelsen ’19, a founding member, said an older student taught him and several others to play.

“Exhilarating, Powerful” — that’s how Brenda Sevcik, one of the group’s leaders, describes the feeling of playing the carillon.

The guild is the busiest they’ve been in the five years since reforming, according to Sevcik. Comprised of 10 students, the guild hosted the first-ever Midwest International Carillon Festival and Composers Forum in 2016. In November of 2019, they participated in a world-wide simultaneous performance of a carillon piece “The Sacredness of the Trees” as part of the annual Nordic Music Days.

“For being a small group, we have connections that reach around the world,” said Abbie Greene, the guild’s president.

Truelsen said in his experience, alumni are comforted knowing the instrument is still being played.

Sevcik and Greene encourage alumni to reach out to the guild to request a song or submit ideas for events. They also hope to see you at their next concert.

“We’re interested in forming those connections with alumni,” Sevcik said. “We love hearing about their experiences and how we can try to make their good memories become memories for students on campus now.”

“Visit us at Nordic Music Days!” Greene added.

What’s your Campanile story? Email your story to us at alumni@uni.edu
The public plays an important role in building community. And the University of Northern Iowa Public Art Incubator is a unique program within the UNI Department of Art that is meeting this rising demand, serving as a conduit between communities and artists to create art for public spaces.

The incubator has been active since 2011, enlisting students to fabricate and erect large-scale public art pieces commissioned and paid for by artists throughout the country. The work it produces can be seen on campus, in downtown Cedar Falls and peppered throughout the Midwest and beyond. UNI-fabricated art is installed on both coasts and in the Bahamas.

SCULPTING THE FUTURE OF public art

In 2014, the art incubator was commissioned to fabricate the iconic Olympic torch for that year’s Special Olympics National Games.

The project brought with it some design challenges. The producers of the opening ceremonies wanted the six parts with the core values of the Special Olympics laser cut into them. The six parts would then be carried to the stage by athletes, celebrities and dignitaries and assembled into the torch.

In the end, the sculpture was 14 feet tall and eight feet in diameter. It was constructed with laser-cut aluminum, steel and polycarbonate, with LED lighting and pyrotechnics for the ceremony. It was erected over four weeks by art shop technician and instructor Dan Perry and two UNI students. It is now permanently installed in Newark outside the New Jersey Special Olympics offices.
9,000 pounds of steel

The largest sculpture the incubator ever produced was finished in the summer of 2017, but it wasn’t installed until August 2019.

The massive, 9,000 pound abstract sculpture of a mortar and pestle was commissioned by the University of Iowa to stand in front of the new College of Pharmacy building and designed by the artist team, Actual Size Artworks, which consists of University of Wisconsin-Madison sculpture professors Gail Simpson and Aristotle Georgiades.

Tasked to construct the sculpture were incubator faculty Perry and Tom Stancliffe, professor of art, along with a team of four students, who were at first daunted by the mountain of metal arriving at the shop.

“It was very overwhelming when the first shipment of metal came in,” said Abigail Hedley, a senior pursuing a BFA in art who has worked in the incubator since her sophomore year. “We knew what the end sculpture would look like, but when you see such a huge mass of metal that’s somehow supposed to end up like the model, your brain fries a little bit. Honestly, you feel a little bit of doubt whether or not you’re capable of doing it.”

But Hedley said that the students were reassured by the preparation and experience of Perry and Stancliffe, who spent six months planning, engineering and modeling the sculpture. Ultimately, it was broken down into 23 sections consisting of more than 160 laser cut parts that were assembled into the final piece.

The sculpture was assembled over 10 weeks in the summer of 2017. The days were filled with the type of problem solving posed by the unique challenge of bending large slabs of metal into specific shapes.

“There is no machine available that can magically do that for you, so it all comes down to levers, pulleys and screw clamps. And typically, every one you own,” Stancliffe said. “You apply lifting force here, pry this part over, clamp the other edge inward, have someone press all of their weight down there, and weld it before it all lets go. There is a lot of drama and adrenaline at times.”
One of the main benefits of the art incubator is that it gives students skills they can apply in real-world situations.

For Hedley, working with the incubator gave her the skills and confidence to apply for her own public art commission in her hometown of Dubuque. She had to create and present a proposal to a city committee for a sculpture with a $10,000 budget, competing against her own peers. And she won the job.

“If I didn’t work at the incubator and I didn’t have these experiences, I would have never had the guts to apply for that Dubuque commission,” Hedley said.

Hedley designed and created the piece based on the idea of home and how it feels to return. The finished sculpture, titled “Honey,” was seven-feet tall and made entirely out of stainless steel with fire-treated elements. It’s on display in Dubuque as part of the Iowa Byways Project.

“The skills I learned here made me feel like I could do this on my own.” - ABIGAIL HEDLEY

In 2015, the art incubator had the opportunity to bring their work into the middle school classroom.

UNI alumna and Waverly-Shell Rock teacher Chelsie Meyer, ‘07, had developed a curriculum where her students would learn about public art and then generate concepts and ideas for a permanent sculpture in their community.

The students presented their designs to the Waverly School and Public Art Committee, which selected a design by students Seth Abkemeier, Luke Tobin and Aubrey Hall. Their sculpture, “Collision,” was fabricated by two UNI students over three weeks. It is now displayed in Kohlmann Park in Waverly.

“It is such a win-win project, where my students and UNI students both benefit from this collaboration.” - CHELSIE MEYER

It is a project that Meyer, who now teaches in Iowa Falls, has continued.

“It is such a win-win project, where my students and UNI students both benefit from this collaboration,” Meyer said. “We are able to make trips to UNI for students to see the sculpture lab, use the plasma cutter and shape their own piece of metal, as well as giving feedback through 3D design software to become more of a part of the design process.”

Meyer developed the class with input from Stancliffe and Perry and said the experience for her students is “priceless.”

“If I just fell in love with the idea of students being able to design sculptures that would shape their landscape.” Meyer said. “This is so empowering for students, who sometimes do not feel like they have a voice until they are an ‘adult,’ to know that their ideas are valuable.”
Amateur photos tell

IOWA’S STORY

In the fall of 1907, a young woman from Colo, Iowa, boarded an “excursion train” in Marshalltown with her two friends, Cora J. and Mabel B., and headed towards downtown Cedar Falls. The train was very, very crowded with students all bound for Cedar Falls. The three young women arrived at about 3:20 on a Saturday afternoon to start their fall semester at Iowa State Normal School (now UNI). They then took a street car, also very crowded, to “Normal Hill,” (now know as College Hill). Cora J. apparently hustled (successfully) to get all three young women seats. Upon arrival they found their boarding house two blocks from campus, dropped off their suitcases and enrolled. The next day they had a meeting with President Seerley (who seemed very nice) and started their methods and studio classes. They found their college professors much more inspiring than their high school teachers. “We are meeting folks from almost all over,” the young teacher-in-training wrote. “One lady who boards at the house where Cora boards is a girl from Texas. She certainly is different from the other girls. Well.”

This story comes from the back of a postcard mailed to Miss Fannie Brand (a friend or sister?) during the college freshman’s first week at the normal school. The postcard itself is a beautiful object: a tri-fold showing a panorama view of Lang Hall from that same year, 1907, and the young woman’s sprawling handwriting explains her first week at school in succulent detail.
like the everyday Iowa history of a young woman’s first week at college. The recently scanned postcard, donated by Catherine Palczewski, was uploaded to the public online photo archive created by a team of UNI faculty and staff called “Fortepan Iowa” (fortepan.us). The nonprofit public digital photo archive was established in 2015 to feature curated, high resolution photos and postcards taken by ordinary Iowans over the nineteenth and twentieth centuries. Placed in chronological order, these 15,000+ photos together tell the story of Iowa, one family snapshot and normal school postcard at a time.

The Fortepan Iowa archive is the first sister site to the well-known Fortepan archive in Hungary (fortepan.hu) which, in just a decade, has become a cultural institution with over 100,000 photographs and a huge and devoted following of everyday Hungarians and members of the photographic, archival, museum, historical society, and library communities. The name “Fortepan” comes from the famous global brand of film that was produced in Hungary from 1921 to 2001.

Today, our teams in Hungary and at UNI use “Fortepan” to refer to a new, community-focused way to think about archiving, photographs and public memory. Like Fortepan in Hungary, Fortepan Iowa seeks to capture history from the ground up, organize and immediately contextualize the high-resolution photos on an easily searchable timeline, and directly connect to community members who exhale in the tagging and description capabilities of the interface.

Fortepan Iowa also licenses all images to the Creative Commons and makes them freely available for download and liberal use (even commercially) without fear of copyright. For all these reasons, this is not a typical online archive. As the Fortepan (Hungary) founder noted, “These [Fortepan] initiatives are aimed at the creation of a new archiving paradigm, based on openness, dialogue and participation, which stands in contrast with the traditional values associated with archives, such as discretion, permanence and immutability.” The teams in Hungary and Iowa are actively disseminating “the Fortepan Concept” (fortepan.us/info) to all corners of the world (Fortepan Malta, Fortepan Romania, Fortepan Denmark) and other U.S. states (Fortepan Ohio, Fortepan Vermont). The immediate mission at UNI is to perfect and expand the Fortepan Iowa archive through partnerships with Iowa public libraries and K-12 schools to model what is possible through community engagement with reliable photos organized by time and place. Doing so both celebrates and expands what it means to be Iowan, and uses these photos to initiate a fruitful dialogue about Iowa that builds upon communities’ collective memory.

What Makes a Good Photo for Fortepan Iowa?

As a professor of interactive digital studies, Bettina Fabos curates Fortepan Iowa images with Noah Doely, professor of digital photography. The larger team also includes Javiec Vos and Tessa Wakefield in Rod Library Special Collections, Philip Hopper, professor of digital media, and Sergey Golitsynsky, a former Panther now at Johns Hopkins University. Together they have harnessed the energy of a few key volunteers and hundreds of dedicated students from UNI’s Interactive Digital Studies program to scan the photographic collections of approximately 470 donors to date. How do they decide what makes up the collection? The focus is on family snapshots taken by amateur photographers. The team finds value in focusing people’s attention on certain types of images that are interesting in a broader context. They like the idea of creating a compelling visual experience through juxtaposition and thoughtful curation, and constantly ask themselves as curators: What’s going to be interesting to a viewer who is not personally connected to the photographs? Is the archive compelling culturally or lyrically? Are the images altogether visually impactful?

They choose images according to six informal categories:

1. **People are attracted to action photos that tell a story; or are perhaps funny, or tragic, or involve a situation that people might identify with, like a political rally, or a certain kind of motorbike. This photograph communicates the action that is just about to happen on the Cronkleton farm near Eldridge.**

2. **Photos of place that connect people to a particular location, for example, a school, a downtown, a workplace; or a particular recreation area. This beautiful photo from 1914 shows a vibrant water scene with boat rides available on the Cedar River in Waterloo 100 years ago. Cedar Falls resident Sue Lequatte donated this image, explaining that her grandfather, Phil Lown, and her dad, Dick Lown, used to give rides on the Cedar River, and built their boat at her great uncle, Al Lown’s, place in Sherwood Park.**
3. **The Fortepan team is also attracted to images that communicate a particular Iowa cultural practice.**

One cultural practice the team is constantly enamored by is Iowa cake photos. Before there were camera flashes, Iowans posed with their birthday cakes outside, even in winter, to find enough light for their photos. This image, donated by Norma Meyer, is typical of the many cake photos uploaded to Fortepan Iowa.

4. **Images that captivate** are a catchall category for those photos that hold magic — a personally touching detail or some kind of accidental framing, a special balance between dark and light, a particular human expression, the magnetic pull of two or more objects in a frame, the isolation, in a compelling way, of a particular thing or person — that elevates an everyday photograph into a piece of art. Very often these photos are unintentionally enchanting. These images keep the Fortepan Iowa archive surprising and lyrical.

5. **Recognizable historical moments** are included, with special attention to images taken from the unique perspective of an amateur photographer.

6. Finally, special love is shown for photographs with people **in the act** of taking a photograph.

Each Fortepan Iowa image contains a story, and through the information received from collection donors, tells stories about Iowa speakers, a beloved motorcycle mechanic, and the sparkly Iowa farm girl who became a successful political staffer in Washington, D.C. We have one series of photographs from the Tom King collection that repeatedly features a woman who is clearly the closest interest of the man behind the camera, who happens to be the donor’s (Tom King’s) grandfather. This woman inspired visual poetry, and the fascinating part is that no family member knows who she is — it’s a family mystery.

With Fortepan Iowa’s relaunch and forum capabilities now associated with each photo, the user community can also expand on the stories behind photos with additional details they may know about an event, an individual, or a piece of equipment, like a tractor model. Through crowdsourcing, the team learned that the man jumping with the kangaroo was an award-winning NCAA gymnast, George Nissen, who competed for the University of Iowa in the late 1950s. Originally from Blairstown, George Nissen invented the trampoline with his coach Larry Griswold in 1937 to perfect his tumbling techniques. Nissen and Griswold established the first trampoline-manufacturing company in Cedar Rapids in 1941, and the Kangaroo photos were taken in Central Park, New York as part of a publicity campaign (the trampoline company’s logo was a kangaroo). It’s worth knowing that the trampoline was invented in Iowa by a local gymnast, UNI.

As the archive expands, other initiatives are underway: a mapping tool to enable visitors to search photos by address; and a tool they are calling “Mainstreet 360°”, which will geo-locate historical photos, decade by decade, onto a streetview-like display. For the prototype, the Fortepan Iowa team will geo-locate approximately 3,000 images from UNI’s campus, so imagine revisiting the campus through this new tool, choosing “1960” and seeing a collage of geolocated photos superimposed on a streetview environment — augmented reality with an historical purpose.

You Can Contribute to Fortepan Iowa

UNI alumni are welcome to visit Fortepan Iowa and participate in the story of Iowa history. Help tell Iowa’s story by tagging photographs or adding your own comments to particular photographs you may know something about. Volunteers are needed to help date photographs, moderate tags and comments, and post Fortepan Iowa photos on Facebook. You may also be interested in volunteering at one of Fortepans scanning hubs at UNI or the public libraries in Anamosa, Cedar Falls, Ottumwa, Sumner and Webster City. If you are interested in contributing family snapshots, glass slides or any type of Iowa-related photo you think might connect with larger publics (digital files only), visit the ‘About’ page on the Fortepan Iowa website (fortepan.us) to follow specific instructions about the image donation process. Where passion and leadership meet

Autumn Pino leaned forward in her chair, focused on the conversation in front of her and tonight’s topic: school finance.

She was about to ask the presenter a question when she sensed a slight movement to her right. She turned and smiled as her daughter slid a sandwich in front of her. With a quick wink and silent “thank you,” she returned back to the dialogue unfolding on her computer screen. Forty-five minutes remained in her virtual class, part of the Advanced Studies Certificate (ASC) in superintendency program at the University of Northern Iowa.

This hybrid program — delivered via Zoom, with Saturday seminars four weekends of the first semester and a class on campus for two days each summer — combines a quality educational experience with a flexibility that gives future superintendents and senior administrators from all corners of the state of Iowa a double path toward achieving a graduate degree. Every two years, a new cohort of about 15 students begin.

“We have students from all over the state, and they’re really appreciative of this virtual mode of delivery, but blended with face-to-face time,” says Denise Schares, ’86, ’94, ’04, who has been with the College of Education program for the past seven years, including leading it for the last three: “I have a student in Marcus, in the far northwest near Orange City, and also in Keokuk. You can’t hardly get much farther in your travels (in the state of Iowa) than that. But it’s been great work, and it really attests to our commitment to serving all geographic areas, as well as metro areas.”

Superintendents are the lead learners of their school systems — and within the K-12 setting, the pinnacle of administration. Interested educators work their way up the ladder through a combination of experience and education, adding endorsements and graduate degrees to fill gaps, gain knowledge and meet licensure requirements. According to historical archives at UNI’s Rod Library, the issue of advanced degree offerings was a topic of discussion at UNI from its earliest days as a teacher’s college. Today’s graduate degrees, including the ASC for superintendency, as well as ASC and master’s for principalship and doctorate in education, are a natural continuum for Iowa’s leader in teacher education.

Pino is one of hundreds of students who have successfully navigated the UNI superintendency program. As a principal at Roosevelt Creative Corridor Business Academy in Cedar Rapids, she’s preparing herself for continued growth. Fellow alumnus Mark Lane, ’16, became superintendent for Decorah schools in July 2019 after 25 years of experience in the Des Moines area, including as associate superintendent in Urbandale.

Travis Schueller, ’13, ’16, has served as superintendent of the North Kossuth and North Union school districts since 2016.

The passion each has for their chosen profession is evident. When they felt it was time to prepare for that next step, each turned to the University of Northern Iowa.

A FLEXIBLE APPROACH

The superintendency program at UNI provides future leaders with the coursework, connections and context to prepare them to lead in accordance with the Iowa Standards of School Leaders. The primarily online, hybrid approach worked well for the three.

“I could be at school all day on Wednesday, work at the office, log in at the computer, connect with our cohort and whoever was teaching the classes. It just really worked with what I was doing professionally at the time. It was good learning, but also convenient,” says Lane.

“One of the challenges for any administrator is balancing work and home life. I take being a mom seriously. This program honored the fact I need a balance in my life, so not going to class every night was helpful to me,” says Pino. “If I knew I had a Tuesday or Thursday night class, I was completely focused on class, but it allowed me to do everything I needed to do leading up to the class.”

A first semester on-campus Saturday class helps build cohort connections. “Because they brought us together — so you meet people face to face — when you were on (the online link), they weren’t just a face on a computer. You knew who they were. It worked really well for people hours away,” adds Schueller, who notes the connection with cohort members persists to this day.
GETTING PRACTICAL

The UNI superintendency program is known for its practicality, both in experiences provided and expertise that’s shared.

“It’s taught by practicing administrators and central office administrators, those with practical experience,” explains Schares. “It’s taught in the field by UNI faculty; we rarely use any adjunct faculty, and we actually go into students’ districts three times during the course of the program, supporting their internship work. These onsite visits with candidates and their mentors is really key.”

Mentors — or critical friends, as they’re called in the program — not only present as part of the curriculum, but coach and remain accessible to the students.

“Hearing from people in the field and finding opportunities via Zoom or on campus for them to share about their lived experience in the role was really beneficial,” says Lane, who recalled hearing from Tony Voss, ’92, superintendent in the Hudson district, and Darwin Lehman, with Forest City.

Schueller found this an opportunity to strengthen his connection with Lehmann, an early mentor, while Pino gained new perspective on building community relationships from Mary Jo Hainstock, Vinton-Shellsburg schools superintendent. Listening to Superintendent Stan Rheingans, ’12, from Dubuque was powerful, she says. “To hear him speak about the future direction of the district and thinking through difficult decisions, and how to do a good job honoring traditions, while leading with foresight, it had me thinking.”

Schares, a former superintendent with Clear Creek Amana school, notes the work of a superintendent continues to become more and more complex.

“There are budget concerns, enrollment concerns, a great deal more work on the social and emotional well-being of students. Declining enrollment has created a great deal more conversation about operational sharing. There are additional requirements for safety planning, concern for securing appropriately endorsed teachers to serve in high need areas — all of those things continue to contribute to the complexity of the work. And they’re addressed in our program,” says Schares.

“What we emphasize is the context of the work. The actual district or districts that you’re serving will bring with it unique challenges and opportunities,” Schares adds. “Our work is really to do the best that we can to prepare them for those challenges and opportunities.”

LESSTONS LEARNED

Each program graduate recalls a specific aspect that left an impact. For Lane, it was a course on power points and ethics. That was an excellent foundation of the political side of the superintendency that you don’t necessarily understand as a principal, ” he said. One of the first things he did upon his move to Decorah was to reach out to the mayor and city council members. “We are all public servants; we can’t work in silos.”

Pino likened being pushed to find her stretch points. “I can talk all day about equity and leadership for students, but an area I need to grow is finance. I liked the opportunities to work closely with the CFO in my district. It’s nice to be able to do that while still in a safe place and still in school.”

Schueller appreciates the practical tools he gained. “One of the things unique about UNI is they have you prepare an entry plan for the first 100 days of being superintendent, for you to present to your board and then return for an update,” he says. “This document helped guide me through that opening three months. I got that from current and former superintendents in class. Everything we did project-wise or assignment-wise had a meaning behind it.”

MOVING FORWARD

Pino completed her final presentation in November. She welcomes whatever’s next.

“This has allowed me to think more about the future. It’s been good to engage in conversations with really great mentors that have lived the superintendency experience, but also know me as an individual student,” she says. “Sometimes in the near future, I will choose to go for a broader position, but will feel humbled enough to know that I would have to be the right fit.”

Last fall Lane was ready for his first fall as superintendent. “I watched my dad become a school administrator and superintendent and watched the way that work filled him with pride and joy. I’ve enjoyed every job that I’ve had. I’m already starting to feel the pride in the job as I walk around the district.”

Schueller’s days are filled with both the challenges and delights of a shared superintendency which covers seven communities, two districts and three building sites. The small town, rural Iowa native considers it a perfect fit. He values the connections made and lessons learned through the UNI superintendency program and regularly talks with principals about entering the UNI ASC.

“I just love my job every day I go to work. You have the best of both worlds, if you want to interact with students, if I want to help instructional leadership with teachers, be part of management, or the finance side,” he says. “It’s an opportunity to be able to impact all different aspects of education. And in the end, it’s all about the students.”
Now, more than 50 years later, Sullivan was invited back to UNI, where he shared with students and the community his experience as a gay man living through one of the most turbulent times for the LGBTQ community.

For UNI, it was a chance to right a wrong and to signal that times have changed at the university.

“[I contacted Tim and apologized on behalf of the university],” said Paula Knudson, vice president of student affairs. “Things have changed at UNI and in Iowa.”

Growing up in rural West Union, Sullivan knew he was different.

In seventh grade, he won first prize in his school costume contest. He went as Marilyn Monroe. Later, in high school, he read an article in Life Magazine about gay men in New York and Los Angeles. It was the first time he had heard that word. “Gay.”

After finding acceptance and rejection at UNI, he decided to head to L.A. with his boyfriend, who worked as a barber on College Hill. Back then, you could get paid driving someone’s car to the coast. So, Sullivan and his boyfriend drove to L.A. on Route 66 in a white Pontiac they picked up in Chicago.

Forced out; welcomed back

It was the fall of 1965 when Tim Sullivan received a letter that shattered his world.

He was a junior at the University of Northern Iowa, then known as the State College of Iowa, and life was good. He was heavily involved in theatre and had a wide circle of close friends. He lived in Ryder Hall. He went to the movies. He had roommates that he liked, and others he didn’t. In short, he was a college student. He felt accepted.

But then the letter came and everything changed. It said he had been ousted as a homosexual by a fellow student and now he had two choices: He could tell his parents he was gay and start seeing a psychiatrist. Or, he would have to leave the university.

Sullivan chose to leave. And he said it was the best thing he could have done.
He was 21 years old.

A year and a half later, he met a man who convinced him to go to New Mexico. Together, they dropped acid and started hitchhiking. They made it as far as Albuquerque before taking a plane the rest of the way.

Sullivan’s friend disappeared shortly after they arrived. For a brief time, he was homeless and directionless. Then one night, he was walking down Fifth Avenue and stopped in front of the storefront window of Bonwit Teller, a high-end department store.

“The windows were showing ball gowns,” Sullivan said. “I had always been interested in fashion, and I had never seen anything like these dresses outside of the movies. I stood and stared at these windows and I knew I was home.”

He found his calling, and Sullivan immediately worked his way up to director of visual merchandising for Brooks Brothers, the oldest clothier in the country.

Sullivan built a life he loved, and he didn’t begrudge UNI its past.

For those who escaped the purge, faculty advisors recommended that the state of Iowa not issue a teaching certificate to any education major suspected of being gay.

Student spies were sent to private parties to collect names and those named were pressured to name more. It was one of these spies that outed Sullivan, who was likely one of the first students expelled by the purge, Hayes said.

Victims of the purge are difficult to find. No official records of students given Sullivan’s ultimatum were kept. So, when Knudson learned about Sullivan’s story, she leapt at the chance to make things right.

Knudson invited Sullivan to speak on campus and visit with students about his experiences.

“It was great to be back at UNI, though it is much changed,” Sullivan said. “A large part of the current campus was corn fields when I was there. Many of the disciplines that I saw did not exist when I was there. I was most impressed with the size and apparent power of the LGBTQ community that exists today.”

Sullivan was the keynote speaker during UNI’s celebration of LGBTQ+ history month. He also spoke to textiles and design students to share his insights from decades working in the fashion world.

It was a whirlwind visit for Sullivan, and the perspective he imparted to students was invaluable.

“I was extremely flattered to be invited back as a guest speaker,” Sullivan said. “It was a wonderful experience for me and a source of many memories.”

For Knudson, Sullivan’s visit was a chance to right a wrong and shine a light on a regrettable university’s past.

“UNI was not alone, but just because everyone else was doing it doesn’t make it right.”

- PAULA KNUDSON
A recipe for success

Inside a storefront bakery in downtown Waterloo, a teenaged employee named Jessica stands in the kitchen peeling apples. Slowly, the pile of unpeeled apples begins to tower over the pile of apples still in their green and red skin. Though she has not yet turned 16, she is saving up her paychecks to pay the auto insurance on her new car in advance and avoid worrying where that money will come from each month.

Another young worker rolls dough into circles. Pemeh’s hands are covered in flour as she carefully lifts the flattened pastry into a pan and crimps the edge. It took a bit of practicing to master the skill, but she does so now with confidence. In the year she has been employed here, she has begun to step out of her comfort zone, making new friends and learning more about the culture of her new home. Pemeh has been saving 25 percent of each paycheck to help pay for college. She wants to study psychology.

The pies the two girls are working to make will be sold from this small storefront nestled across the street from Lincoln Park and across the Cedar Valley.

It is easy to see the young women enjoy their work and the company of the other girls. Tomorrow, the girls will gather with other members of the team to focus on ACT prep. Unlike traditional workplaces, their employer, Try Pie, is devoting resources to enable teens to manage their paychecks, prepare for future employment, understand their unique gifts and recognize value in each other.
While still a student at the University of Northern Iowa, Sarah Helleso, ’15, began volunteering for Try Pie, an organization formed by a partnership between Heartland Vineyard Church in Waterloo and Orchard Hill Church in Cedar Falls. The work of these congregations, operating under the umbrella of Link Christian Community Development, focused on the flourishing of Iowa’s Cedar Valley, specifically the Walnut Neighborhood of Waterloo.

Helleso quickly realized this young organization could provide a meaningful internship. So she began making plans. When Helleso reached out to her adviser Julianne Gassman, ’92, ’96, associate professor in the department of health, recreation and community services, to tell her she’d found the perfect internship, Gassman initially disagreed.

“I told her no,” Gassman recalls of their initial conversation. She was worried Helleso would not gain as much knowledge from a nonprofit in its infancy as she would from one that was firmly established.

Helleso laughs while recalling the same conversation. “I don’t remember a really firm no. I heard more of a, ‘Hmm. I’m not so sure that’s a good idea.’ Which to me was just like, ‘That’s OK. We’ll fill in the blanks here.’”

What Helleso saw in Try Pie, a social enterprise program that exists to provide young women with meaningful work, was the opportunity to combine what she was learning in her classes as a leisure, youth and human services major and a business management minor.

Helleso was having conversations in and out of the classroom with professors like Gassman and Laurie Watje, associate director of the John Pappajohn Entrepreneurial Center at UNI, who taught her entrepreneurship classes.

“I was seeing this gap between the nonprofit sector and the [ability to apply some] business-focused values that could launch their mission forward.”

At the same time, Helleso was learning more about Try Pie from Megan Tensen, ’12, who was then employed by Orchard Hill Church, splitting time between college ministry and local mission efforts.

“I really believed in [the idea of] social enterprise of business ministry and nonprofitship,” recalls Helleso. “I was excited about this opportunity but knew I couldn’t do it unless I could call it my internship.”

Once Gassman understood Helleso’s vision to apply knowledge she was gaining from both her fields of study to the young organization, she agreed to the internship placement.

Tensen and Helleso are now a team at the helm of Try Pie, which recently received its own 501c3 status and operates as an independent organization.

“I really believed in [the idea of] social enterprise of business ministry and nonprofitship.” - SARAH HELLESO
we’re a teen employment program for high school girls from Waterloo and Cedar Falls,” Tensen says. “We want to give the girls their first job opportunities and a place to recognize the gifts and skills they have and can contribute to a community, and then learn to see the value of that in each other.”

As a social enterprise, Try Pie has an overlap between business and mission. Profit from the sales of pies and other products go straight back into the organization’s work to equip young women and strengthen the community. As a 501c3, the organization is also able to accept donations and apply for grant funding to support its mission.

Hands-on experience in the kitchen and store front is complemented by time spent in a classroom setting with curriculum that focuses on four pillars: job skill development, financial literacy, faith development and reconciling community — the idea that we all have something to contribute and learn from each other in our community. Girls are paired with volunteer mentors and establish personal, work and financial goals.

While no student is required to have any kind of faith or interest in developing that in their lives, the belief that God created us all with unique gifts and skills to share is central to the organization.

“After you accomplish that goal, you feel like you’re on top of the world,” Pemeh says excitedly. “When you establish these goals, other people cheer you on,” Jessica said. Sharing the goals helps make each girl accountable. Both admit they would not have been likely to establish financial or other goals had it not been for their experience at Try Pie.

The extra effort sets Try Pie apart as an employer.

“When you’re in close proximity with the equal intention of preparing girls for work and preparing them for life, you are able to notice a lot more of what a student might need to develop and grow as a person,” Helleso said.

“As the organization has grown, Tensen and Helleso have relied on the relationships they built while students at UNI for support.”

“It has been great to stay in close communication with our professors and feel cheered on and affirmed in what we’re pursuing,” says Tensen. “But we also know that we have people to turn to as a resource to ask questions and learn from their expertise and wisdom.”

The pair has reached out to the John Pappajohn Entrepreneurial Center for tools that helped Try Pie scale up and have also relied on the knowledge they gained in the classroom as students themselves.

Throughout Try Pie’s growth, Tensen and Helleso have been committed to letting the girls in the program continue to have ownership, developing new recipes, managing marketing and social media for the organization, exploring opportunities to grow business and assisting in managing finances.

Try Pie has found a recipe for success. 

As we can see, Try Pie is a social enterprise that aims to provide job experience to high school girls while teaching them valuable skills and encouraging them to establish personal, work, and financial goals. The organization has a unique focus on faith development and reconciling community, which sets it apart as an employer. The hands-on experience in the kitchen and store front is complemented by time spent in a classroom setting with curriculum that focuses on four pillars: job skill development, financial literacy, faith development, and reconciling community.

As the organization has grown, Tensen and Helleso have relied on the relationships they built while students at UNI for support. They have also reached out to the John Pappajohn Entrepreneurial Center for tools that helped Try Pie scale up and have relied on the knowledge they gained in the classroom as students themselves.

Throughout Try Pie’s growth, Tensen and Helleso have been committed to letting the girls in the program continue to have ownership, developing new recipes, managing marketing and social media for the organization, exploring opportunities to grow business and assisting in managing finances. Try Pie has found a recipe for success.

If you are interested in learning more about serving on the Alumni Board, please contact Leslie Prideaux at leslie.prideaux@uni.edu.

DISTINGUISHED AWARDS RECIPIENTS

Recipients of the University of Northern Iowa’s 2019 Distinguished Awards gather with UNI President Mark Nook.

Front row: UNI President Mark Nook; Larry McLibben ’70, Alumni Achievement Award; Mary Theilen ’99, Young Alumni Award; Sara Phillips ’04, Emerging Philanthropist Award; Jersey Jermier, Honorary Alumni Award.

Back row: Doug, ’72, and Rosie, ’72, Lindaman, Alumni Service Award; Bruce Jorth and Doug Opheim with RSM, Corporation and Foundation Award; Dick, ’63, and Carol, ’65, Savage, Purple and Gold Award.

Not pictured: Sally Frudden, ’55, ’72, Faculty and Staff Award.

UNI and DMACC partnership

The University of Northern Iowa and the Des Moines Area Community College (DMACC) entered into a brand-new partnership to allow DMACC students a simpler pathway to a four-year degree without having to leave Des Moines.

The new program, known as ‘UNI at DMACC’, allows students to complete the first two years at DMACC and the final two years at the DMACC Urban Campus through UNI. Students are able to earn a Bachelor of Liberal Studies degree. The intention of the program is to make a four-year degree more accessible to DMACC students while eliminating the obstacles caused by relocation.

This partnership is the culmination of nearly a year’s worth of conversations between UNI President Mark Nook and DMACC President Rob Denson. DMACC’s urban campus currently has over 5,000 students enrolled, and the program is set to begin in the fall of 2020. While this is the first time UNI will have a physical presence in Des Moines, the schools have shared a partnership for over twenty years.

“The Liberal Studies degree at DMACC’s Urban Campus is a demonstration of our commitment to finding new ways of bringing a four-year degree to students across the state of Iowa, no matter their location,” Nook said. “This degree has large employability and opens many doors for graduates. We are grateful for our long partnership with DMACC and are excited to provide an accessible education to Des Moines-based students through this innovative program.”
UNI receives national award for student voting participation

The University of Northern Iowa was the retroactive recipient of the Silver Seal Award from the ALL IN Campus Democracy Challenge for after it was discovered UNI had one of the top two student-voting rates in the country.

This belated recognition was received after UNI joined the challenge in the summer of 2018. It was discovered that in the 2016 presidential elections, 67.5 percent of UNI students went to the polls, a figure nearly 18 points above the national average. This success can be attributed to the hard work of student groups on campus, such as the Northern Iowa Student Government (NISG).

“UNI is a campus full of highly engaged and civic-minded students, so it was not a surprise that we would do well, but I am very impressed with the 2016 results,” stated political science professor Justin Holmes. “It reflects not only the engagement of our students, but the hard work of various groups to engage and mobilize them. We look forward to building on our past success and to continue our tradition of high participation.”

University of Northern Iowa named a Best Business School by The Princeton Review

The University of Northern Iowa finds itself in an elite company of business schools after being recognized by The Princeton Review on its list of “Best Business Schools for 2020.” The Princeton Review is a leading tutoring, test prep, and college admission services group performs a yearly survey of over 20,700 students and 248 schools.

“We recommend University of Northern Iowa as an excellent choice for a student aspiring to earn an MBA,” said Rob Franek, The Princeton Review’s Editor-in-Chief. Franek noted that the opinions of current students factor into the decision, as well as academic offerings, admission requirements, and graduates’ employment.

“It is a true honor to be consistently named a best business school by the Princeton Review. The success of our students is a direct reflection of our commitment to them. We will never stop pushing ourselves to deliver the best business degree that emphasizes professional readiness, global engagement and confidence to face the challenges of tomorrow,” said Leslie K. Wilson, ’84, dean of UNI’s College of Business Administration.

Additive Manufacturing Center to become one-of-a-kind facility

UNI’s Additive Manufacturing Center (AMC) took the first step towards becoming the only university in the world to boast having an automated investment casting facility when the two of three robotic machining cells arrived on campus this spring.

This groundbreaking expansion combines cutting-edge additive manufacturing technology with automated computer processing that allows for faster production than ever before. The cells create an automated investment casting mold that can be integrated with existing pattern printing technologies.

“The automation applications into the metal casting industry will help elevate the skill sets of the workforce while removing workers from environmentally and physically challenging or dangerous applications,” AMC operations manager Travis Flush said. “Operators will use robots to support the menial and basic material handling requirements of the casting process.”

The AMC is a world-class 3D printing and casting center that helps keep Iowa’s industry supply chain on the leading edge of innovation. It is staffed by current UNI students, allowing them to gain valuable job experience while they help meet the demands of small businesses from across the state.

UNI Chemistry/Biochemistry Department Receives $25,000 grant from NASA for research projects

In February 2020, the UNI Department of Chemistry and Biochemistry was selected as the recipient of a $25,000 grant from the Iowa Space Grant Consortium, which is a fellowship partnered with NASA.

The funding was used to purchase specialized equipment to enhance the learning of students, as well as expanding research opportunities. The equipment includes a spectrometer and other biosampling tools used on an undergraduate research trip to Wind Cave National Park in South Dakota. The funds will also support a planned student trip to NASA’s Jet Propulsion Lab in California for astrobiology experimentation. UNI biochemistry professor and lead investigator Josh Sebree said these research trips are an opportunity unlike any other for undergraduate students.

“We’re very fortunate to have received this funding,” Sebree said. “Not only is this a one-of-a-kind opportunity for the students, who normally wouldn’t get to go on a research trip like this at the undergraduate level, but it’s also an opportunity for us to help others by contributing to national park conservation efforts, and NASA’s efforts to explore the possibilities for life on other planets.”

**80s**

- **1980**
  - **Jerry Ask, BA**, Cedar Rapids, was named to the top advisors in Iowa for Forbes and Barron’s.
  - **Pat (Caheny) Cunningham**, BM, Auburn, IA, performed Copland’s “Clarinet Concerto” with the New Hampshire Philharmonic Orch.
  - **Laura Leonberger, BM**, Westlake, OH, decided to move to Hawaii after 28 years of wintering in Minnesota. She is now teaching home economics and is an administrator.

- **1981**
  - **Kevin Bozarth, MA**, Lasersohn, KS, was named to the governor’s board of undergraduate alma mater, Nebraska Wesleyan University.
  - **Lisa (Hundert) Chiek**, MA, HS, Chicago, IL, performed as a certified residential counselor and realtor with EXP Realty.
  - **Terry York, MA**, York, NE, was named to associate director of health systems with Novant Health New Jersey.
  - **Bill Schapp**, MA, Hinsdale, IL, was named to associate director of the Los Angeles office of Fox Rothschild LLP.

- **1982**
  - **Steve Netz, BA**, Apple Valley, MN, was named to the Top 50 L&F PWP Solutions.

- **1983**
  - **Jan Best, BA**, Norcross, GA, is the director of business development and market strategy at AbbVie.

- **1984**
  - **Chris (Keenan) Fagan, BA**, North Bend, WA, published a book titled “The Expedition: Two Parents Risk Life and Family in an Extraordinary Quest to the South Pole,” which was listed as a must-read of the year.

- **1985**
  - **Daniel Waller, BA**, Collegeville, TX, is senior director for strategic, information technology growth with Nutrion Finance. He plans to exit the agricultural world and is naming the Belk Gym Pool gift in honor of E. Farris, Sr.

- **1986**
  - **Ken (Roesler) Ross**, Las Vegas, NV, is executive director of Washoe County Schools effective 7/1/2019.

- **1987**
  - **Bill (Lange) Brown**, Madison, WI, was named as the Top 50 LPGA Teachers for 2018.

- **1988**
  - **Jim Lee, BA**, Woodstock, GA, is the director of global sales and product development at TRUE Sports.

- **1989**
  - **Jon Best, BA**, Norcross, GA, is the director of business development and market strategy in Asia.

- **1990**
  - **Scott M. Habersham, BA, Asheville, NC, published a book titled “The Craft,” which examines how corporate decision makers perceive, react and think in critical moments.

- **1991**
  - **Sandy (Singh) Bown, BA**, Cedar Falls, was promoted to executive director of the Iowa Public Television Foundation.

- **1992**
  - **Brian (Kornick) Stavros, BA**, Des Moines, retired after 39 years. She taught kindergarten in Saint Cloud, MN, retired from New Hope Reg. Schools.

- **1993**
  - **Joanne (Clemens) Smith, BA**, Vinton, IA, was named to the 2019 Iowa Presidential Awards for Excellence in Mathematics and Science Teaching.

- **1994**
  - **Aileen (Mahood) Sullivan, BA**, Jesup, is the director of the Iowa Governor’s Teachers Cabinet in Dec. 2018.

- **1995**
  - **Maureen DeArmond, MA**, Shenandoah, TX, retired after 25 years. She taught social studies three days a week.

- **1996**
  - **Sylvester Brown, BA**, Oskaloosa, IA, was named to the Class AA Boys’ Golf Coach of the Year from the Iowa High School Golf Coaches Association and the Iowa Boys’ Golf Coach of the Year from the National Federation of High Schools Iowa.

- **1997**
  - **Deb Vangellow, BA**, Cedar Falls, was named one of the Waterloo/Cedar Falls Courier’s 8 Over 80 for 2019.

- **1998**
  - **Charles Jenkins, BA**, Johnston, IA, was named to the 2019 Black Hawk County Gold Star Award for Outstanding Teaching.

- **1999**
  - **Diane (Pleske) Anderson, BA**, Tripoli, received the 2019 Iowa Presidential Awards for Excellence in Mathematics and Science Teaching.

- **2000**
  - **Julie Bright, BA**, Ankeny, IA, was named one of the Waterloo/Cedar Falls Courier’s 8 Over 80 for 2019.

- **2001**
  - **Charles Jenkins, BA**, Johnston, IA, was named to the 2019 Black Hawk County Gold Star Award for Outstanding Teaching.

- **2002**

Thank you

While many aspects of 2020 have been in flux, one thing remains constant: the importance of friends like you. Thank you. We are grateful for your generosity and the ways you champion the students, faculty and staff of the University of Northern Iowa.

The passing of the new Coronavirus Aid, Relief, and Economic Security (CARES) Act is part of the country’s response to help taxpayers, businesses and nonprofits in these extraordinary times. The new law has a few key provisions that may affect you, your loved ones and your charitable goals, including:

- A new charitable deduction
- A change to required minimum distributions
- An opportunity for those who itemize
- Learn more at uni.planmylegacy.org/cares-act.

For more information on the CARES Act or how you can make plans to support UNI contact:
